1. iTMC - What? I can run my HMI through an iPad? You can with ThinManager 6.0 XLi, but you'll want to come to the ThinManager 6.0 Launch & Training April 16-18 so you can learn how to install and configure ThinManager to push your HMI, MES, ERP, SPQ, SQC and more to your iPad. This will be an immersive hands-on experience. ACP will have more than a dozen iPads in the Launch Pad Expo area for you to try your hand at mobile management. You'll also have a chance to win one of many iPads to be given away during the Launch. Not only can you experience the power of iTMC, you might be able to take your own device back to the plant and show everyone how a modern plant floor should operate.

2. Training Certification - Do you want to get up-to-date on your ThinManager Certification for half the price of standard hands-on training? Then you can't miss the largest hands-on training event ACP has ever held. During the training course portion of the Launch, you will have access to a personal laptop running terminal services, a dual monitor thin client, keyboard and mouse and access to multiple virtual machines. The hands-on training includes a 4 hour class for advanced ThinManager training and a 2 hour class for virtualization training. When you complete the hands-on training, you will receive an updated ThinManager 6 Training Certificate.

3. New Remote Access Service - What do you do when you need to manage multiple plants around the country or the world? With the new remote access site that provides a secure connection between computing devices over the web, you simply make a 100% secure, encrypted connection to any licensed ThinServer and perform all of the management tasks that you previously had to be on site to accomplish. What if the plant calls at 2:00 a.m. and they need you to walk them through an issue with one of your HMIs? With the new remote access site (provided by ScreenTronix™) you can just get on your home PC and securely connect to your ThinServer back at the plant and have full access to ThinManager to troubleshoot the issue.

...plus 7 more

4. Vertical Customer Presentations – We have actual end-users presenting their own experiences using ThinManager. Hear how other people in your industry are using ThinManager to increase operational efficiency.

5. Vertical HMI Presentations – Whether you use Wonderware, Intellu-tion, Proficy, RSView or DeltaV, we have experts representing each of these HMI systems at the Launch to present and discuss using the ThinManager platform in conjunction with their product.

6. Take a walk through our Hands-On Interactive Expo – Spend some time with experts in the field, watch 15 minute mini presentations, and grab an iPad to use ACP's newest iOS applications. All of these interactive opportunities will revolve around our special "Mission Control" Presentation that ties it all together.

7. Architecture to ROI sessions – Sit down with ACP and your reseller to discuss your existing or upcoming projects in the Expo Living Room or a Private Meeting environment. We'll help you develop a plan from architecture to software requirements to pricing to ROI justification.

8. ThinManager ROI Calculator – Receive the newest release of ACP's ThinManager ROI calculator and get a 30 minute training course on how to use it to make the best choice for your PC computing platforms.

9. A Special Keynote speaker on Tuesday – Can you see into the future? Our Tuesday Keynote Speaker can.

10. The Entertainment – Yes, I know this isn't a reason you'd take to your boss, but we will have some great night-time performances and many chances to win cutting edge Apple products.

Need More?

USB to VGA support – Add a second monitor to your single monitor thin client. With XLi licensing, your single monitor client is now dual monitor using this new inexpensive adapter. See it first at the ThinManager 6 Launch!

New ThinManager firmware – Combined with XLi licensing, you can now get a greater variety of supported thin client devices from the likes of HP, Wyse, Lenovo and many others that work with ThinManager.
