

Mobile Management

ACP now offers a complimentary iOS app to its award-winning ThinManager platform that provides administrators with a mobile management and diagnostics solution. ThinManager for iPhone and iPad allows configuration and management of ThinManager-booted devices from anywhere on your network.

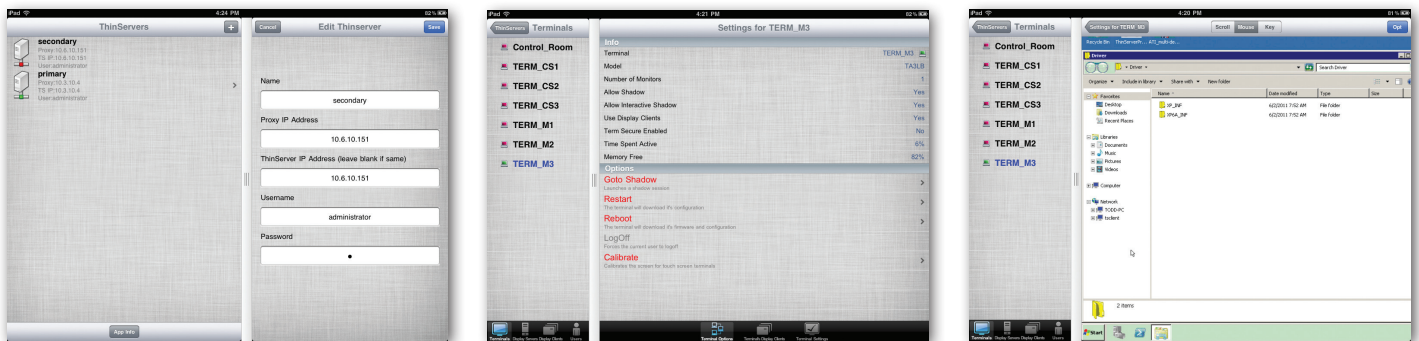

This new, mobile version of ThinManager gives you access to almost all of the powerful features available in the desktop version of the Platform including:

- View and shadow sessions from terminals placed anywhere in your factory environment.
- View IP camera feeds and see who's logged in and what they are working on.
- Reboot servers and/or operator terminals.
- Send feedback directly to ACP and much more.

The new ThinManager app is available today at the Online App Store from Apple®.
