**Below are several ThinManager product descriptions. Please choose one to apply to your application in its entirety.**

---

ThinManager provides software solutions for the plant floor that enable easy deployment of applications and content to every computer while increasing hardware capabilities with a powerful set of features and tools. ThinManager software reduces maintenance and downtime by streamlining the management of all devices.

ThinManager is the world's most powerful thin client management platform. ThinManager allows centralized configuration and management of terminal servers, thin clients, IP cameras and virtual machines and mobile devices from an easy-to-use desktop application. Combined with the new Relevance adaptive mobile platform, ThinManager also provides secure, location-based application delivery to mobile devices by delivering the right information to the right person at the right time.

ThinManager began developing thin client management software in 1999. Based in Alpharetta, Ga., ThinManager distributes its flagship platform around the world to equip modern industrial facilities with a robust, reliable platform that manages servers, thin clients, IP cameras, virtual machines, mobile devices and more. Over 1000 companies in 30 countries, including one in ten Fortune 500 companies, use ThinManager and ThinManager-Ready Thin Clients for their daily operation.

---

ThinManager is a worldwide leader in the automation industry, providing full-featured industrial Thin Client management software. Our unique technology is embedded into products from several industrial computer manufacturers, creating superior Thin Client devices. It can also boot many thin clients from vendors like HP, Wyse and others using PXE boot technology. When compatible thin client hardware is combined with ThinManager's ThinManager, customers have performance and features that include server load balancing, redundancy, instant failover, multiple sessions, multiple monitors and hardware that long outlast standard PCs. ThinManager 4.1 and higher also manages virtual machines and has support for iPhone and iPad. Over 1000 companies in 30 countries, including one in ten Fortune 500 companies, use ThinManager and ThinManager-Ready Thin Clients for their daily operation.

---

ThinManager is a complete thin client management solution for industrial and office grade thin clients. ThinManager allows configuration and management of terminal servers, thin clients, IP cameras, virtual machines and mobile devices from an easy-to-use desktop application as well as an iPhone and iPad app. Over 1000 companies in 30 countries, including one in ten Fortune 500 companies, use ThinManager and ThinManager-Ready Thin Clients for their daily operation.

ThinManager is a worldwide leader in the automation industry, providing full-featured industrial Thin Client management software. Our unique technology is embedded into products from several industrial computer manufacturers, creating superior Thin Client devices. It can also boot many thin clients from vendors like HP, Wyse and others using PXE boot technology.

ThinManager software enables performance and features that include:

- Server load balancing (Efficient use of resources)
- Centralized Management, Configuration and Scalability (Lowers support costs)
- Redundancy (No downtime)
- Instant Failover (No downtime)
- Multiple Sessions (Increased productivity)
- Multiple Monitors (Control room ready)
- Terminal to Terminal Shadowing (See sessions anywhere)
- Hardware that long outlast standard PCs. (Lowers support costs)

ThinManager 4.1 and higher also manages virtual machines and has support for iPhone and iPad. Over 1000 companies in 30 countries, including one in ten Fortune 500 companies, use ThinManager and ThinManager-Ready Thin Clients for their daily operation.

# Product Descriptions

## and General Company Information

ThinManager is a complete thin client management solution. Manage industrial and office-grade thin clients from multiple vendors with powerful features that include:

- Server load balancing (Efficient use of resources)
- Centralized Management, Configuration and Scalability (Lowers support costs)
- Redundancy (No downtime)
- Instant Failover (No downtime)
- Multiple Sessions (Increased productivity)
- Multiple Monitors (Control room ready)
- Terminal to Terminal Shadowing (See sessions anywhere)
- Hardware that long outlast standard PCs. (Lowers support costs)

ThinManager also manages virtual machines and has support for iPhone and iPad. Over 1000 companies in 30 countries, including one in ten Fortune 500 companies, use ThinManager and ThinManager-Ready Thin Clients for their daily operation.

ThinManager is the only company that provides full-featured industrial Thin Client and Terminal Server management software. Since 1999 our unique technology has also been embedded into products from industrial computer manufacturers, allowing them to bring to market superior Thin Client devices. When combined with ThinManager's ThinManager, each client has performance and features unmatched by products from any other company, with benefits such as:

- Thin Client hardware that never becomes obsolete
- Automatic configuration of new clients
- Redundancy and Failover
- Server Load Balancing
- Proven installations with all HMI and SCADA software

ThinManager's unlimited licensing options allow larger companies to standardize on a single management tool throughout their company. About one out of ten Fortune 500 companies, along with over 1000 other companies in 30 countries rely on ThinManager and ThinManager Ready Thin Clients for their daily operation.

ThinManager is the world's most powerful thin client management platform. ThinManager allows configuration and management of terminal servers, thin clients, IP cameras and virtual machines from an easy-to-use desktop application and a mobile app. Combined with Relevance, the new adaptive mobile platform, ThinManager also provides unprecedented control over mobile-based work environments.

ThinManager is the world's most powerful thin client management platform. ThinManager allows centralized configuration and management of terminal servers, thin clients, IP cameras and virtual machines and mobile devices from an easy-to-use desktop application. Combined with the new Relevance adaptive mobile platform, ThinManager also provides secure application delivery to mobile devices used in location-based work environments by delivering the right information to the right person at the right time.
