

ThinManager Enterprise Licensing

ThinManager® combines our unique hardware enabling technology with a proven Thin Client management interface. Enterprise editions bring the ACP system solution to enterprise installations, allowing an unlimited number of connections by ThinManager Ready Thin Clients.

ThinManager Enterprise is available in two versions:

- Enterprise - Server
- Enterprise - Site

Enterprise Server Licensing

Server Licensing includes licenses for two ThinManager Servers, providing redundancy at a single location. With each ThinManager Server License you receive a 5-pack of SmartSession and an unlimited MultiSession license. This allows for an unlimited number of thin clients and terminal servers on a single network.

Enterprise Site Licensing

Site Licensing provides a single license that can be installed on an unlimited number of ThinManager Servers at a single location. This license provides for redundancy and departmentalization of ThinManager Servers. Each ThinManager Server License installed includes an additional 5-pack of SmartSession and unlimited MultiSession licenses. Enterprise Site extends the enterprise server licensing to all networks at a single facility.

ThinManager Server Plus or Site Plus

“Plus” Licensing goes well beyond the standard with unlimited licenses for many ThinManager Modules and PlugIns. Current licensed modules include the Share Keyboard and Mouse module, the Instant Failover module, the MultiMonitor module, MultiSession, and SmartSession.

*ThinManager offers a scalable solution
that works for a single remote location
all the way up to a worldwide
networked industrial infrastructure.*
