

# ThinManager Licensing

ThinManager® combines our unique hardware enabling technology with a proven Thin Client management interface. Enterprise editions bring the ACP system solution to enterprise installations, allowing an unlimited number of connections by ThinManager Ready Thin Clients.

## ThinManager Enterprise is available in two versions:

### 1. Enterprise Server Licensing

Server Licensing includes licenses for two ThinManager Servers, providing redundancy at a single location. With each ThinManager Server License you receive a 5-pack of TermSecure. This allows for an unlimited number of thin clients and terminal servers on a single network.

### 2. Enterprise Site Licensing

Site Licensing provides a single license that can be installed on an unlimited number of ThinManager Servers at a single campus.\* This license provides for redundancy and departmentalization of ThinManager Servers. Each ThinManager Server License installed includes an additional 5-pack of TermSecure. Enterprise Site extends the enterprise server licensing to all networks at a single facility.

### ThinManager standard licensing and components

ThinManager can also be purchased in 5, 10 and 25 packs for smaller installations. All first-time ThinManager installations of version 4.0 or later come with a 5-pack of TermSecure licenses which allow you to add another layer of security to your plant floor network. Additional TermSecure licenses are sold separately.

MultiMonitor adds the ability to run multiple monitors on one thin client. Special hardware that supports multiple monitors is required.

Use ACP's WinTMC application to turn any PC into a ThinManager configurable and manageable client.

ThinManager also has numerous modules that expand the functionality of thin client hardware like sound, touch screens, etc.

Comprehensive Support is available for free the first 30 days from purchase. After this Comprehensive Support is available through your distributor and is renewed annually.

ThinManager 4 includes MultiSession, SmartSession, Instant Failover, Terminal-to-terminal Shadowing, Redundant Ethernet and Shared Keyboard & Mouse as part of the core product in both enterprise and standard versions.

\*Campus is a group of buildings owned by the site license holder that are within a 1/4 mile radius.

**ThinManager offers a scalable solution that works for a single remote location all the way up to a worldwide networked industrial infrastructure.**
