# ACP ThinManager Tech Notes

# Alternative Terminal Keystrokes

Use the **F1** button on any page of a ThinManager wizard to launch Help for that page.

Visit www.thinmanager.com/TechNotes/Intro/Manuals.shtml to download the full Manual or the ThinManual.

WinTMC creates an RDP connection to a terminal server. While using WinTMC some keystrokes, like CTL+ALT+DEL, aren't available because they act on the local machine.

Microsoft has provided these alternatives.

| Keystroke | Replaces | Function |
|---|---|---|
| ALT+PAGE UP | ALT+Tab | Switches between programs from left to right. |
| ALT+PAGE DOWN | ALT+Shift+Tab | Switches between programs from right to left. |
| ALT+INSERT | ALT+ESC | Cycles through the programs in the order they were started. |
| ALT+HOME | CTL+ESC | Displays the Start menu. |
| CTRL+ALT+BREAK | | Switches the client between a window and full screen. |
| CTRL+ALT+END | CTL+ALT+DEL | Brings up the Windows Security dialog box. |
| ALT+DELETE | | Displays the Windows menu. |
| CTRL+ALT+Minus (-) symbol on the numeric keypad | ALT+PrintScreen | Places a snapshot of the active window, within the client, on the Terminal server clipboard (provides the same functionality as pressing PrintScrn on a local computer.) |
| CTRL+ALT+Plus (+) symbol on the numeric keypad | CTL+PrintScreen | Places a snapshot of the entire client window area on the Terminal server clipboard (provides the same functionality as pressing ALT+PrintScrn on a local computer.) |
