12.4 Terminal Shadow Display Clients

Terminal Shadow Display Clients allow a terminal to shadow another terminal. The Shadow Display Client can contain a specific terminal or several terminals.

12.4.1.1 Group Name Page

Terminal Shadow Display Client - Group Name Page

Importance of Page: This page starts the configuration wizard, sets the name, and the type of Display Client. **Fields:**

• Group Name - This field is used to name the Display Client.

Settings:

- Type of Display Client drop-down box selects the function of the Display Client.
 - **Terminal Services** This creates an Display Client that allows a terminal to connect to a terminal server, login, and run a session.
 - **Terminal Shadow** creates an Display Client that allows a terminal to be shadowed by another terminal.

Buttons:

• **Permissions** - The button will launch the **Permissions** window that allows Permissions to be set for TermSecure. This is discussed in Permissions.

Why Change from Default Settings: The group needs a name and a type assigned to it.

This section covers **Terminal Shadow** Display Clients. Configure the Display Client by selecting **Terminal Shadow** from the **Type of Display Client** drop-down after naming the group.

Select the *Next* button to continue.

Terminal Shadow Display Client – Display Client Options

Importance of Page: This page allows the configuration of Display Client parameters **Checkbox:**

- **Allow group to be tiled** If checked, this allows the Display Client to be tiled in SessionTiling. See SessionTiling Options for details.
- **Allow Group to be moved (MultiMonitor)** If checked, this allows a Display Client to be moved from one MultiMonitor screen to another. See MultiMonitor for details.
- Include IP Camera Overlays This will allow IP Camera overlays to be added to this Display Client.
- Always maintain a connection This keeps a session active, reconnecting and restarting if it is closed. If unchecked, the user can close a session and another session won't start automatically.
- **Connect at boot-up** If checked, the terminal will start a session for this Display Client at boot up. If unchecked, a user action is required to start the session.
- **Disconnect in background** If checked, a Display Client being used in a MultiSession configuration will disconnect once it is moved into the background. This could be done to require fewer resources.

Why Change from Default Settings: The *Always maintain a session for this group* and *Start a session at boot-up for this group* checkboxes, if unselected, will lower the demand on the terminal servers by allowing sessions to be closed until needed.

Select *Next* to continue, *Finish* to save and close, or *Cancel* to close without saving.

12.4.1.2 Terminal Shadow Display Client Page

The Terminal Shadow Display Client page allows the selection of the terminal or terminals to be shadowed.

Terminal Shadow Display Client – All Terminals Available

Importance of Page: This page selects what terminals are available to be shadowed using Terminal-to-Terminal Shadowing.

Checkbox:

- All Terminals Available This checkbox allows all terminals to be shadowed. Unselect it to limit Terminal-to-Terminal Shadowing to specific terminals.
- Interactive Shadow This checkbox allows interactive shadowing of the terminals.

Fields:

• **Terminal to Shadow** – This list box shows the terminals available to shadow.

Buttons:

• Add – This button adds terminals to the Terminal to Shadow list box when All Terminals Available is unselected.

• **Delete** – This button deletes a highlighted terminal from the Terminal to Shadow list box *when All Terminals Available* is unselected.

Why Change from Default Settings: The default setting grants permission to shadow all of the terminals. Unselecting the *All Terminals Available* checkbox allows specific terminals to be added. Additionally, multiple shadow groups can be created, each with a specific terminal or group of terminals.

By default the Shadow Group is configured to allow all terminals to be shadowed. Unselecting the *All Terminals Available* checkbox will allow the designation of specific terminals.
