SHADOWING & VNC

Viewing information from other devices is a snap with ThinManager.

ThinManager offers a variety of ways to customize the user experience at any particular terminal.

Shadowing allows an administrator or a user to view and/or operate a terminal remotely.

VNC sources can be shadowed and deployed to any terminal including mobile devices.

ADMINISTRATIVE SHADOWING

ThinManager administrators have the ability to shadow every terminal directly from the ThinManager interface. Simply click the show tab after selecting the terminal you wish to shadow. You can even shadow individual monitors connected to the terminal you are shadowing.

TERMINAL TO TERMINAL SHADOWING

There are many times that a user needs to see what is being displayed on another terminal. ThinManager's Terminal to Terminal Shadow feature let users easily view content from other sessions running on other terminals. This feature alone makes troubleshooting much less time-consuming.

VNC VIEWING

VNC display clients also allows users, based on permissions, to access content directly from other devices like PanelView, PanelView Plus and PanelView 5000 as well as any other device that has a VNC server built in. Combined with Relevance, these features work on mobile tablets as well.
