

# **ThinManager Installation**

Use the F1 button on any page of a ThinManager wizard to launch Help for that page.

Visit www.thinmanager.com/TechNotes/Intro/Manuals.shtml to download the full Manual or the ThinManual.

ThinManager can be installed on Microsoft workstations (Window 2000 Pro or XP Pro) or Microsoft Server 2000/2003/2008. Software needs to be added in the **Install Mode** through the **Control Panel> Add/Remove Programs** on Microsoft Server 2000/2003/2008 when Terminal Services is enabled. Failure to use the Install Mode can prevent an application from working properly.

Note: ThinManager does not need to be reinstalled to add more licenses.

Note: Do not install the WinTMC client on the ThinManager Server.

Using the Add/Remove Program function is a good idea regardless of the operating system. Select *Start>Settings>Control Panel>Add/Remove Programs* to open the Add/Remove Programs dialog box.

# Add/Remove Programs

Select the *CD or Floppy button* on the Add/Remove Programs Properties dialog box to open the Installation wizard. The wizard will prompt for the insertion of the ThinManager CD. When the CD is inserted, the wizard will ask for the path to the setup program. Enter the path, or select the *Browse* button to browse to the ThinManager setup.

The ThinManager 3.2 CD has four directories. The ThinManager setup is in the ThinManager directory.

ThinManager Application Selection

Although ThinManager appears to be a seamless program, it has two major components and utilities.

ThinManager is the graphic user interface. It is installed to view and control the program.

- **ThinServer** is the engine that drives the program. It is a vital component that needs to be installed with ThinManager to allow ThinManager Ready thin clients to boot and be configured. ThinServer is the component that requires licensing. It is separated from ThinManager in the installation to allow additional instances of ThinManager to be installed for remote administration.
- **ThinManager Utilities** includes tools like the touch screen calibration program. This can be installed just on the ThinManager Server if the Calibrate Touch Screen will be triggered from ThinManager only, or can be installed on terminal servers that have clients with touch screens connected to them if they Calibrate Touch Screen program is to be triggered in a client session.

Check the desired components and select the *Next* button to finish the install.

# Installation Complete

Select the *Finish* button to complete the installation.

Once ThinManager is installed it needs licenses to make it active.
