ACP ThinManager Tech Notes

Setup Overview

Use the **F1** button on any page of a ThinManager wizard to launch Help for that page.

Visit www.thinmanager.com/TechNotes/Intro/Manuals.shtml to download the full Manual or the ThinManual.

All you need to know about ThinManager
(in 100* words or less)

Terminal Server

❑ Build a terminal server with the Microsoft Windows 2003/2008 Server operating system. Enable Terminal Services.

❑ Create a Microsoft Licensing Server and add a TS CAL (Terminal Server Client Access License) for each thin client. They also require a normal CAL.

❑ Create a Microsoft user profile for each terminal on the terminal server. Make sure that the user is a member of the Remote Desktop Users Windows group.

❑ Apply appropriate security to each user profile using the standard Microsoft techniques.

ThinManager Server

❑ Install ACP ThinManager software onto a computer to create a ThinManager Server.

❑ Install an ACP License for each ThinManager Ready thin client.

ThinManager Ready Thin Clients

❑ Establish the IP addressing scheme for the thin clients, Static IP or DHCP.

❑ If using DHCP, configure Option 066 to list the IP address of the ThinManager Server.

❑ Attach the terminals to ThinManager by either:

   o Turning on the terminal and selecting the "Create New Terminal" option when the offline terminals are listed.

   o Pre-creating the terminals in ThinManager and selecting the proper terminal name when the terminal is turned on and offline terminals are listed.

❑ The clients will connect to the ThinManager Server and download the firmware and configuration. The configuration will send them to the terminal server to login and start a session.

Note: Visit www.thinmanager.com/TechNotes/Intro/Manuals.shtml to download the full Manual or the ThinManual for full details on these steps.
