

Microsoft Commands

Use the **F1** button on any page of a ThinManager wizard to launch Help for that page.

Visit www.thinmanager.com/TechNotes/Intro/Manuals.shtml to download the full Manual or the ThinManual.

Terminal Services has several commands that aid in managing the terminal server. Some useful ones are:

Command	Action
change logon	Temporarily disables logons to a Terminal Server
change port	Changes COM port mappings for MS-DOS program compatibility
change user /install	Puts the server into "Install Mode"
change user /execute	Removes the server from "Install Mode"
Ipconfig	Displays the IP addresses of the network card
Logoff	Logs off a user from a session and deletes the session from the server
net send <i>username</i> "message"	Sends a message to a user. username is the NT/2000 user name that the person or terminal is logged in as. "message" is the text of the message. Quotation marks are needed for any messages containing a space.
query process	Displays information about processes running on a Terminal server
query session	Displays information about sessions on a Terminal server
query termserver	Displays a list of all Terminal servers on the network
query user	Displays information about user sessions on a Terminal server
reset session	Resets a session to known initial values
Shadow	Monitors another user's session
Tsdiscon	Disconnects a client from a terminal server session
Tsshutdn	Shuts down the terminal server in an orderly manner

Commands to launch useful Microsoft programs include:

Command	Action
gpedit.msc	Launches the Group Policy Editor
tscn.msc	Launches the Terminal Services Configuration Console
tsadmin	Launches the Terminal Services Manager
